Defin: Almost Sure Convergence

We say $(X_n)_{n=1}^{\infty}$ converges almost surely

if $X_n(A) \rightarrow X(A) \ \forall A \in A \in S$ where P(A) = 1.

Denote this as $X_n \xrightarrow{a.s.} X$.

Ex. S=[0,1] w/ uniform density.

(et Xn(s) = s+s

 $\chi(A) = A$

Does Kn a.s. X?

for which A does Xn(s) -> X(s)?

If $s \in [0,1)$ there as

 $\chi_n(A) = A + A \xrightarrow{n} A = \chi(A),$

$$X_{n}(A) = A + A \rightarrow A = X(A)$$
.
If $A = 1$ then $\lim_{n \to \infty} X_{n}(A) = X(A)$.
 $X_{n}(A) = 1 + 1^{n} = 2 \neq 1 = X(A)$.

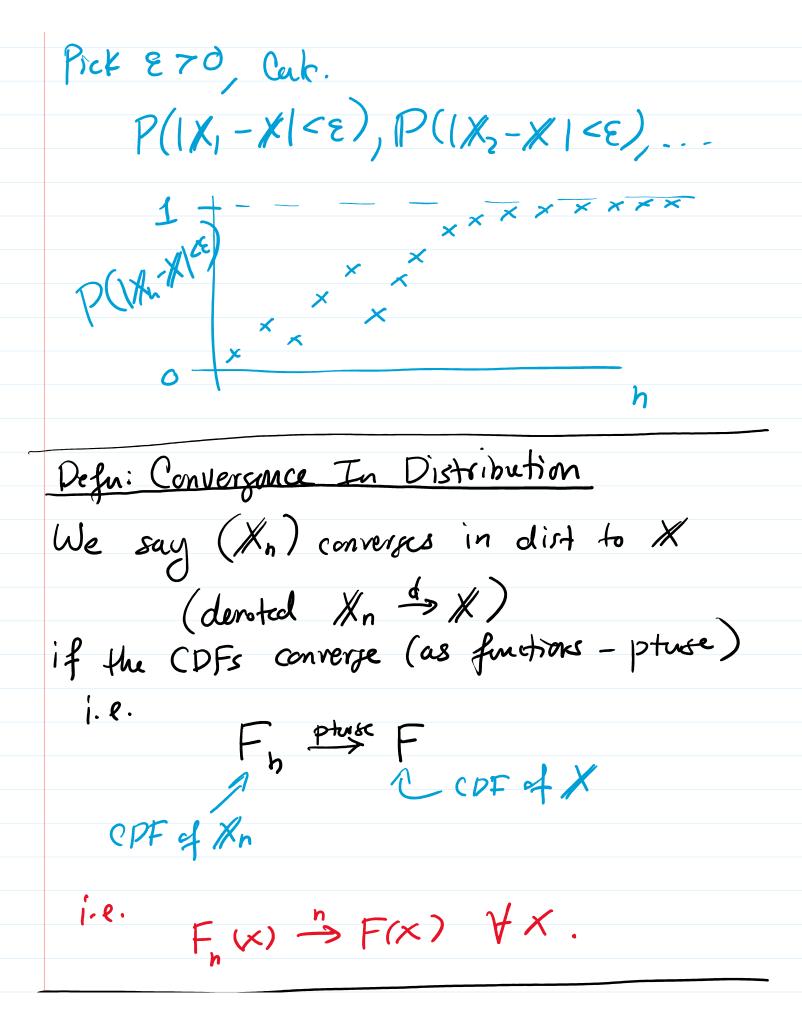

So
$$A = [0,1)$$
 and $P([0,1)) = 1$
So $X_n \stackrel{\text{a.s.}}{\longrightarrow} X$.

Defin: Convergence In Probability

We say (Xn) converges in prob. to X denoted Xn => X

if $\forall \epsilon > 0$ lim $P(|X_n - X| < \epsilon) = 1$. x_n is less tha ϵ away from x

eguiv. VEZO 11m P(1Xn-X/>E) = 0.

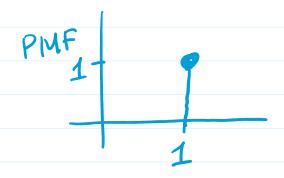

Theorem:

a.s.
$$\Rightarrow p \Rightarrow d$$

Converses are typically fulse.

$$\frac{gp.}{n}$$
 let $\chi_i \stackrel{iid}{\sim} U(0,1).$
and let $Y_n = \max_{i=1,...,n} \chi_i$.

Intition:

Show that
$$\frac{1}{\ln 1}$$
.

Need to show: $\forall \epsilon 70 P(|X_n - X| \ge \epsilon) \rightarrow 0$

$$P(|Y_n - 1| \ge \epsilon)$$

$$= P(|1 - Y_n| \ge \epsilon)$$

$$= P(1 - |Y_n| \ge \epsilon) \quad b/c \quad Y_n \le 1$$

$$= P(|Y_n \le 1 - \epsilon)$$

$$= P(X_1 \le 1 - E, X_2 \le 1 - E, ..., X_n \le 1 - E)$$

$$y/c Y_n = \max_{i=1,...,n} X_i$$

=
$$Y(X, \in (-\epsilon) \cdot Y(X_2 \in (-\epsilon) - \cdots Y(X_n \in (-\epsilon)$$
)
by indep. of X_i

$$= P(X_{i} \leq 1 - E)$$

$$= b/e \quad X_{i} \text{ have some}$$

$$= dist$$

$$U(0,1)$$

If
$$\frac{\varepsilon > 1}{\varepsilon}$$
 then $1-\varepsilon < 0$
then $P(x_i \le 1-\varepsilon) = 0$

If
$$0 \le \epsilon \le 1$$
 then
$$P(X_i \le 1 - \epsilon)^n$$

$$= (1 - \epsilon)^n$$

then
$$P(X_i \le 1 - E) = 0$$

 $0 \le E \le 1$ then
$$P(X_i \le 1 - E)$$

$$= (1 - E)^n$$

all together,
$$P(|Y_n-1| \geq \epsilon) = (1-\epsilon)^n, \quad 0 < \epsilon < 1$$

$$\Rightarrow = \begin{cases} 0, & \xi > 1 \\ 0, & 0 < \xi \le 1 \end{cases}$$

So $\frac{1}{n} \xrightarrow{P} 1$.

Let's show that $\frac{1}{n} \xrightarrow{Q} 1$.

Need to show: $F_n(y) \rightarrow F(y)$ by

COF of fCOF of f

CDFof

Cet's get CDF of Yn.

$$F_{n}(y) = P(Y_{n} \neq y)$$
